Summer 2007
 Energy services for commercial customers

Vancouver Island and Sunshine Coast edition

Customer cameo

Ask Hoa Tran if he uses any secret family recipes in the menu of his popular and cosy Vietnamese restaurant and he'll look as if he wants to dodge the question. "They're all secret!" he says with a widening grin.

Hoa Tran is the proprietor of Saigon Pho To Go in

Surrey, and has been a Terasen Gas commercial customer for many years. His new restaurant, however, is a relatively recent venture. "I used to run a mushroom farm," he explains, "but I didn't see enough of my family." These days Hoa's whole family lend a hand

running the restaurant business. "I do the cooking mostly, while my wife, and even my son and daughter pitch in, though they're both still going to school," says Hoa.

Despite having only been open a few months, Saigon Pho To Go has gained a regular customer following. "When we first started, the business was mainly take-out," says Hoa. "But now we're seeing more customers dropping by to fill the place up. I suppose it takes time for word to get around."

Hoa uses natural gas in his business for cooking, and space and water heating. "Yes, we need natural gas", says Hoa. "We couldn't cook the way we do without it, and it makes

sense on the business cost side to carry it through with the heating (system)," says Hoa.

The Vietnamese word "pho" refers to a traditional broth with noodles. It's a staple dish and is one of the major attractions in the bright and sunny corner restaurant. "I would say our most requested dish is our beef noodle," says Hoa. "We use only the freshest beef. Of course, you need good suppliers to keep up your standards—like you folks!" adds Hoa with a hearty chuckle.

Saigon Pho To Go is located at 8973 152nd Street, Surrey, near Fraser Highway.

LNG storage proposal will benefit Islanders

Terasen Gas (Vancouver Island) Inc. has filed an application with the BC Utilities Commission to construct and operate a liquefied natural gas storage facility on Vancouver Island.

The intended location for the plant is Mt. Hayes, approximately eight kilometres north of Ladysmith. The site occupies 142 hectares to be purchased by TGVI from Island Timberlands.

"This project will play an integral role in the regional distribution of natural gas," said Doug Stout, Terasen Gas Vice President, Marketing and Business Development. "The LNG plant will help ensure a steady supply of fuel during times of high demand for both Island customers and those in the Lower Mainland."

The proposed storage facility will also create substantial mid-Island economic and employment benefits, including:

- \$50 million in local construction spending
- approximately 120 person-years of local, direct employment
- increased local goods and services purchase activity
- nine full-time jobs at the facility

Estimated project and associated costs range from \$175 to \$200 million. If approved, the natural gas storage facility will come into service by late 2011.

Fortis completes acquisition of Terasen Gas

It's official—Fortis Inc. has completed its purchase of Terasen Inc. This makes the new owner of Terasen Gas the largest investor-owned gas and electric utility holding company in Canada.

Fortis Inc., with headquarters in St. John's, Newfoundland, already has a 120-year history in business, primarily as a generator and distributor of electricity.

Here on the West Coast, FortisBC currently provides electricity to over 150,000 customers in communities throughout south central BC, including Kelowna, Osoyoos, Trail, Castlegar,

Princeton and Rossland.

The acquisition of Terasen Gas will deliver another 900,000 customers to the Fortis family of companies, almost doubling its total customer base to 1.9 million.

"For Terasen Gas customers, employees and the communities we serve, it's business as usual," says Terasen president and CEO, Randy Jespersen. "Though the company has changed hands, this will not change how we deliver natural gas or propane to our customers' homes or businesses. Nor will it change our rates, how we bill for natural

gas delivery, or our ability to respond to natural gas emergencies. Terasen Gas will continue to be headquartered in Surrey."

For more information on the purchase of Terasen by Fortis Inc. please visit www.terasengas.com

Before you demolish, deal with the details

When you're planning to demolish a building with a gas service connection, even if you suspect it is not active, please follow correct safety procedure. This is for your own safety and that of everyone in the surrounding area.

If you're the owner of a building due for demolition, please call our Customer Service Centre at 1-888-224-2710. We'll arrange a suitable date to terminate the gas service and assign a Terasen Gas field crew to remove the gas meter from the site and cap the riser. Call early. On Vancouver Island, the meter can usually be removed within three weeks of your request.

Never assume that the absence of a visible gas meter in or around a building means it's safe to begin demolition. You must check with Terasen Gas first by calling 1-888-224-2710.

For further excavation safety information and procedures regarding the disconnection of a service, demolitions, or altering an existing service, visit the *For Building Professions & Trades* section of www.terasengas.com

If you would like to tell us how your business makes good use of natural gas, and be featured in our Customer Cameo section, send an e-mail to dennis.light@terasengas.com
